Re: Highlube Fluid Engineering Pty Ltd

Highlube has been servicing our lubrication systems at Port Kembla Coal Terminal (PKCT) since 1990.

Highlube upgraded the lubrication systems on 2 of our reclaimer machines. Highlube's project team managed, designed, installed and serviced the lubrication system on both reclaimers.

To this day Highlube carry out various lubrication maintenance tasks on our ship loaders, stackers and reclaimers. Over the years Highlube has developed several lubrication maintenance and service procedures which are in place to eliminate failure and increase machine productivity.

We have found Highlube Fluid Engineering Pty Ltd Total Lubrication Management services to be beneficial to Port Kembla Coal Terminal, Highlube have designed, manufactured and installed bulk oil and grease storage systems for our service workshop, they have also designed and fitted out and continue to maintain our onsite fluid handling truck.

PKCT have found Highlube's knowledge in lubrication systems and lubrication product's to be beneficial to our business the continual assistance in our maintenance programs and extreme diligence with regards to safety whilst being onsite shows Highlube's professionalism.

Best Regards,

Adam Giddings (Mechanical Maintenance Schedule Planner)  
Rob Royters (Maintenance Eng)  
Port Kembla Coal Terminal
